PROJECTS

Title : Mask Detector with ML

Description : The purpose was to create a mobile application which can detect if a person is wearing a mask or not. The application supports Android as well as iOS

Title : Hospital Management System

Description : The aim was to develop a computerized system to maintain all the daily

work of Hospital Thus, the system reduces manual work to a great extent allows smooth flow of hospital activities by removing chances of errors in the details.

Title   : Airline Management System

Description   : The goal was to make an application which can manage and hold record for reservation and also create ticket number so each person can get a unique identification number.

Title   : Online Attendance Management System

Description   : Themain aim was to develop a software which can manage student attendance in a more effective way. The software system is based on inserting, deleting, searching and updating of database management system.

Title   : Hotel Website Development

Description   : The main task was to build a website from scratch for a Hotel. The project used Owl Carousel to display a carousel slider. It also includes fontawesome integration to display icons. This project helped me understand more about the DOM manipulation in JavaScript.

Title   : Minimal Poster Maker

Description   : This project was just for self assestment to see how comfortable I was with HTML, CSS and JavaScript. I learned about how to use JavaScript to select a picture and display it correctly in the browser.
